Course Description

This course is designed to introduce students to the theory of systems of linear equations and to mathematical proof. Topics include solving systems of linear equations, linear independence, linear transformations, matrix operations, determinants, vector spaces, eigenvalues and eigenvectors, and applications. Prerequisite: C- or higher in MATH222 Calculus II; waiver by placement testing results; or departmental approval.

Required Text and Materials

Textbook: Linear Algebra and its Applications, 5th edition by David Lay, Steven Lay, and Judi McDonald.

Calculator: TI-83 or 84 required. You may not use a cell phone, tablet, or computer as a calculator.

Teaching Procedures

This course will be taught in a lecture/discussion format with ample opportunity for student questions. Generally, class will begin with a question and answer session on the most recent homework assignment. New material will then be presented in a lecture format and homework be assigned to reinforce the topics covered in class.

Student Learning Outcomes

COURSE OUTCOMES	SAMPLE OUTCOMES ACTIVITIES	SAMPLE ASSESSMENT TOOLS
Upon successful completion of this course students should:	To achieve these outcomes students may engage in the following activities:	Student learning may be assessed by:

1. Solve systems of linear equations and interpret their results; (QL)	• Write systems of linear equations in matrix form • Determine when a system of linear equations is consistent • Solve systems of linear equations using row reduction and give parametric descriptions of solution sets • Solve applications of linear systems	• Homework • In-class problem sets • Quizzes • Exams
2. Describe properties of linear systems using vectors; (QL)	• Geometrically interpret vectors in R^2 and R^3 • Use and verify algebraic properties of vectors in R^n • Determine whether a vector can be written as a linear combination of a set of other vectors • Find and give a geometric interpretation of the span of a set of vectors • Determine if a set of vectors are linearly independent	• Homework • In-class problem sets • Quizzes • Exams
3. Demonstrate an understanding of linear transformations; (QL)	• Understand the connection between matrix transformations and linear transformations • Find the image of a vector under a transformation • Find the standard matrix of a linear transformation • Show how images can be reflected, contracted, expanded, sheared, and projected using transformations.	• Homework • In-class problem sets • Quizzes • Exams
4. Perform and interpret matrix operations; (QL)	• Understand properties, proofs, and computations involving matrix addition, multiplication, and transposes • Determine when a matrix is invertible and calculate its inverse • Use properties and characterizations of an invertible matrix for proofs	• Homework • In-class problem sets • Quizzes • Exams
5. Compute and interpret determinants of matrices; (QL)	• Compute determinants of square matrices using row reduction and cofactor expansion • Use determinants to show if a set of vectors is linearly independent	• Homework • In-class problem sets • Quizzes • Exams
6. Demonstrate an understanding of vector spaces and subspaces; (QL)	• Define a vector space and a subspace of a vector space • Compare and contrast the null space and column space of a matrix • Find a basis and the dimension of the subspace spanned by given vectors • Examine how to impose a coordinate system on a vector space • Find $\dim \text{Nul } A$, $\dim \text{Row } A$, $\dim \text{Col } A$, and/or $\text{rank } A$ for a matrix A	• Homework • In-class problem sets • Quizzes • Exams

7. Demonstrate an understanding of eigenvalues and eigenvectors; (QL)	- Find the basis for the eigenspace corresponding to a given eigenvalue - Use the characteristic equation of a square matrix to calculate its eigenvalues - Find eigenvectors corresponding to eigenvalues	- Homework - In-class problem sets - Quizzes - Exams
---	--	---

This course includes the following core competencies: Quantitative Literacy (QL)

Basis for Student Grading

Grades for this course will be assigned as follows:

Grade	Average
A	93%-100%
A-	90%-92%
B+	87%-89%
B	83%-86%
B-	80%-82%
C+	77%-79%

Grade	Average
C	73%-76%
C-	70%-72%
D+	67%-69%
D	63%-66%
D-	60%-62%
F	0-59%

The grade you earn is the grade you will receive in this course. Grades are not negotiable. You will not be allowed to make up work, substitute alternative assignments, or submit extra assignments in order to improve your grade during the semester or after the semester ends.

Grades of incomplete are given only in situations when extenuating circumstances prevent a student from taking the final exam or fulfilling a specific requirement in the course. The grade of "I" cannot be used to give students additional time to complete course assignments in order to raise their grade.

Homework/Quizzes:

The online homework exercises and Quizzes are assigned via MyMathLab. You can attempt those homework exercises an unlimited number of times. Homework exercises help you to master the concepts and prepare you to take the quizzes. Students are allowed to get help on these exercises.

Students can re-take a quiz up to three times; the best score will be recorded. No make-up quiz given for any reason.

Tests

There will be four In-class Exams and Comprehensive Final Exam. Test and dates will be announced ahead of time. Problems on tests will be similar to either the suggested exercises or problems covered in course lectures. All four tests are comprehensive. Exams must be taken during the regular class time and no make-up exams will be given. The lowest exam grade will be dropped.

Tentative Test Schedule/Assignment(s) Schedule

Assignment:	Tentative Date:
Test 1	
Test 2	
Test 3	
Test 4	
Final Exam	

Attendance/Participation

Attendance and participation are critical components toward your success in this course. You are expected to attend every class and to be active in the learning process. You are responsible for all material covered in class, regardless of whether or not you are present.

Attendance and participation will be worth 10 % of your grade. Throughout the term, you will be allowed 2 absences, excused or unexcused. Each additional absence will result in losing a point off the attendance portion of your final grade. Excessive lateness and/or leaving class early will also result in absences.

The grade for this course will be weighted based on the following categories:

Basis for Evaluating Student Performance

The grade for this course will be weighted based on the following categories:

Homework & Quizzes	15%
Attendance & Participation	10%
4 Exams	50%
Final Exam	25%
Total	100%

Accommodations Statement

The Office of Access & Disability Resources (ADR) is committed to ensuring that students with disabilities have equal, effective, and meaningful access to all academic programs, community events, goods, and services provided by the College in compliance with the Americans with Disabilities Act and Section 504 of the Rehabilitation Act. Students with disabilities interested in establishing eligibility for services and/or academic accommodations will need to voluntarily disclose their disability to ADR, submit qualifying documentation and complete an ADR Intake meeting. During the meeting reasonable and appropriate academic accommodations will be determined. Visit the [Office of Access and Disability Services website](#) for more information and to begin the process to establish eligibility.

ADR uses a platform called Accommodate to manage the accommodation process. To make an initial accommodation request, please [submit a request through Accommodate to ADR](#).

Returning students with accommodations previously approved can request updated Accommodation Letters by accessing the ADR card in the MyMassasoit student portal. Log into Accommodate and click on Semester Request.

Students are expected to check in with faculty regarding approved accommodations. Communication between students, faculty, and ADR is key to successful accommodation implementation.

Students can contact ADR at 508-588-9100 x1807 or by email at adr@massasoit.mass.edu.

Tentative Class Schedule

The tentative class schedule is provided below.

Week/Dates	Scheduled Topical Coverage	Other Notes
Week 1	○ Course Introduction ○ 1.1 Systems of Linear Equations	
Week 2	○ 1.2 Row Reduction and Echelon Forms ○ 1.3 Vector Equations	
Week 3	○ 1.4 The Matrix Equation $A\mathbf{x}=\mathbf{b}$ ○ 1.5 Solution Sets of Linear Systems	
Week 4	○ 1.5 Solution Sets of Linear Systems ○ Exam 1	
Week 5	○ 1.6 Applications of Linear Systems ○ 1.7 Linear Independence	
Week 6	○ 1.8 Introduction to Linear Transformations ○ 1.9 The Matrix of a Linear Transformation	
Week 7	○ 2.1 Matrix Operations ○ 2.2 The Inverse of a Matrix	
Week 8	○ 2.3 Characterizations of Invertible Matrices ○ Exam 2	
Week 9	○ 3.1 Introduction to Determinants ○ 3.2 Properties of Determinants	
Week 10	○ 3.3 Cramer's Rule, Volume, and Linear Transformations ○ 4.1 Vector Spaces and Subspaces	
Week 11	○ 4.2 Null Spaces, Column Spaces, and Linear Transformations ○ Exam 3	
Week 12	○ 4.3 Linearly Independent Sets; Bases ○ 4.4 Coordinate Systems	
Week 13	○ 4.5 The Dimension of a Vector Space ○ 4.6 Rank	
Week 14	○ 5.1 Eigenvectors and Eigenvalues ○ Exam 4	
Week 15	○ 5.2 The Characteristic Equation ○ Review for final	
	○ Final Exam Period
